Download the data sheet

What is not Included?

We offer the fundimental elements that are required to build a LiFi network but additional equipment is required:
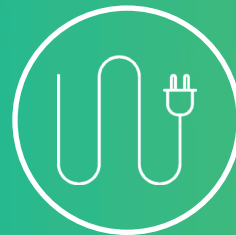

Router

Requires I.P. Address Assignment Capabilities

uPoE / PoE+ Switch

Requires 25 Watt per device per port

Ethernet Cables

CAT5 or CAT6

Internet

Intranet Server

Router & Switch

Access Point

TX Driver

Luminaire

Transmitter

Receiver

What Else?

Your fully networked, full-duplex, wireless LiFi system includes drivers compatible with Linux & Windows devices.

The system can be deployed through PoE or using a standard mains powered solution. We recommend deploying using PoE+ (30 watt) to minimise the cabling required.

Please Note:
No personal support is available for the starter kit, but a set-up manual & test guide are included.

(If you decide to deploy your system using a mains powered solution, an appropriate, certified power supply can be purchased from pureLiFi at an additional cost).

What to do next?
Let our pureLiFi team member know you would like to proceed and we will send you a proforma, to complete.
